Goals

Automatic test cases on bugs

As we did in 2016, I want to continue to create automatic test cases to cover bugs. In order to perform this action the chosen bugs must be testable with RCPTT.

My objective is to cover at least 50 with test cases during 2017.

Automation testing of the GUI

During 2017 I want to implement at least 150 new test cases, which cover the application functionalities. I will use the QA test cases as a base and provide a coverage percentage to the Head of Product Development on a monthly basis.

Continuous Integration Maturity

Within Q1 2017, I want to setup a new Jenkins CI instance dedicated to GUI Tests. This will support running all the test cases we have available in new builds.

With this tool I will measure the coverage percentage of the running tests, and report this value to the Head of Product Development on a monthly basis.

Test Coverage of Product

I want to create a Matrix table which covers all XDM modules and verify the match between manual and automatic test cases. The output of this table will be the % of coverage per module and the % of coverage on the overall product. Since the number of test changes over time I will make sure the matrix is up to date every month on the end of month.

The goal results will be measured on timeliness and completeness of the report.
